Guild Facebook Use

As a woodworker in 2018, you need to know how to use a computer, how to navigate the Internet, and how to use computer programs designed to help you in your woodworking! You need to visit our Facebook Page or our website.

If by now, you don't know how to send and receive e-mails or how to navigate the Internet you are denying yourself access to valuable woodworking tips, wood shop suggestions, getting free project plans or the ability to communicate with suppliers and other woodworkers.

Go to the Guild's Facebook Page and Website regularly! They are FREE to use. They both have valuable information on them just for YOU! Our Facebook Page is up-dated almost daily with new woodworking articles, tips, and project plans for you to use and enjoy for FREE!!

Using the Guild's Facebook Page and Website plus other woodworking Internet sites is the cheapest and fastest way to learn more about woodworking than any other seminar, retreat, or woodworking school.

Hand Saws

Are you considering buying a new Handsaw? Or, do you just want to know more about them? Try Woodcraft's website, search for 'hand saws.' (See Below)

<https://www.woodcraft.com>

There you will find 80+ handsaws listed and 75 articles about handsaws.

A sharp handsaw is a basic woodworking tool. However, there have been many changes relating to all saws in recent years. These changes have reduced the cost of buying a new handsaw or for that matter, any saw blade, of any type.

As a secondary effect of these changes is the cost of getting, a saw properly sharpened may now almost equal the cost of buying a new handsaw or saw blade! Plus, number of saw sharpening businesses are dwindling daily. This means your ability to get a handsaw or any saw blade sharpened at all is decreasing while the cost of getting it properly sharpened is increasing at the same time.

This is especially true if you have a Japanese or a saw that cuts in both the push and pull stroke or one that has a high number of teeth per blade inch.

For example, a backsaw with 14 to 20+ teeth per blade inch, that you would use to do fine wood cuts like dovetails, can almost cost you the same as buying a new saw vs the cost of sharpening one that is now dull.

When buying a new high priced handsaw or any saw blade for that matter, confirm where can you to get it properly re-sharpened and at what cost before you buy it!
